Text-Based Adventure Game

PS No. 39 · Python Mini Project

Language	Python 3
Concepts	Conditions, loops, functions, random module, user input
Starting location	Forest

About the Project

This is a simple, interactive, text-based adventure game written in Python. The player starts in a forest with 100 health points and a score of 0. At each turn, the player chooses to enter a cave, visit a river, or quit the game.

Game Rules

Menu option	Action	Result
1 — Cave	A monster attacks	Random damage from 10 to 40. If health remains above 0, the player finds a key worth +20 points.
2 — River	Find treasure	Adds +50 points. Health stays unchanged.
3 — Quit	End the game	Displays final score and remaining health.

Features

• Menu-driven gameplay with repeated choices using a while loop.

• Separate functions for monster damage, forest menu, cave, river, and main game logic.

• Random monster damage using Python's random.randint().

• Input validation: invalid choices do not reduce health.

• Health is capped at a minimum of 0; the game ends if health reaches 0.

Requirements

Python 3.x. No third-party packages are required; the project uses Python's built-in random module.

How to Run

Save the source code in a file named **adventure_game.py**.

Open a terminal or command prompt in the folder containing the file.

Run the command below:

```
python adventure_game.py
```

On some systems, use **python3 adventure_game.py** instead.

Example Menu

```
=== Text-Based Adventure Game ===
Health: 100 | Score: 0
```

```
You are in the Forest. Where do you want to go?
1. Cave
2. River
3. Quit
Choice:
```

Project Structure

```
Adventure-Game/
■■■ adventure_game.py
■■■ README.md
```

Note: If you want to keep the original filename, you can use that filename in the run command instead.
